Full-stack engineer and founder building products with **TypeScript, Next.js and PostgreSQL**. Built PolyFundr to **5,000 users and \$100K+ ARR** as sole engineer, developed AI-powered analytics as a founding engineer at RhiniestoneAI, and led growth integrations and OAuth migration at Turo. Comfortable owning the full product lifecycle, from deciding what to build to shipping and supporting it in production.

Experience

Founder | PolyFundr May 2026 - Present

- Built and launched a prediction-market trader funding platform as sole engineer, reaching **5,000 users** and **\$100K+ ARR**, with 500 paid evaluations priced at \$50-\$650 and \$15K in trader payouts.
- Built evaluation and risk systems, trading workflows and admin tooling in NestJS, Next.js, PostgreSQL and WebSockets, with resilient error handling to maintain service availability through Polymarket API failures.
- Owned product development and launch execution, created marketing assets and videos, and managed community staff alongside sole responsibility for the platform's engineering.

Senior Software Engineer | Turo Oct 2024 - May 2026

- Built Kubernetes infrastructure across all environments and custom OAuth flows for migration to WSO2, supporting **3.5M users** across web, iOS and Android with Terraform, Docker and Argo CD.
- Led Login with Uber from design through rollout, delivering a **25% lift in driver conversion** for an integration serving **100K+ renters** and becoming a major source of new users and bookings.
- Built account-linking APIs and web login; coordinated iOS and Android delivery, reviewed designs with the Senior Director of Engineering, and partnered with Uber engineers on integration and production support.
- Implemented passwordless Autologin for single-page checkout, enabling booking before signup; **80% of new drivers booked through this flow**, reducing steps and time to complete a reservation.
- Built deferred deep linking that preserved login context through app installation, plus New Relic dashboards and alerts that detected production incidents across authentication and onboarding.

Founding Engineer | RhinestoneAI (now Steel) Jul 2023 - Mar 2024

- Built a text-to-SQL system using multi-agent RAG to select from **50+ tools**.
- Enabled **sub-second aggregations across billions of rows** using Rockset.
- Designed vector-database query caching to accelerate complex SQL queries.
- Shipped the frontend and a custom command palette with Next.js, Radix UI and TypeScript.

Senior Software Engineer | Railvision Analytics Jan 2023 - Jul 2023

- Rebuilt the GraphQL API from scratch to support real-time AI data and frontend requirements.

Intermediate Software Engineer | Clutch Aug 2021 - Jan 2023

- Designed distributed job scheduling with Kafka, RabbitMQ and AWS for ML training and email delivery.
- Increased event-processing throughput **5x** by optimizing event streaming infrastructure and Elasticsearch.
- Integrated third-party services across internal tools and customer-facing applications.

Education

University of Bristol, UK 2019-2022
Computer Science with Innovation

Stack

Languages	TypeScript, JavaScript, Java, Python, SQL
Application	React, Next.js, NestJS, Node.js, Spring Boot, PostgreSQL, MongoDB, GraphQL, WebSockets
Infrastructure	Kubernetes, Docker, Terraform, AWS, Argo CD, GitHub Actions, New Relic
Systems	OAuth 2.0, WSO2, Kafka, RabbitMQ, RAG, vector databases
